

### H5 EDGE®: Manage your most important asset before it becomes a liability.

For most companies, organizing electronically-stored information so that vital information is readily available and irrelevant information isn't retained forever is a constant battle. Identifying and segregating the vast amount of digital information that meets a company's retention criteria is the now the name of the game, and so is the defensible deletion of unnecessary data. That's where H5 EDGE® comes in.

#### Our Information Governance Solutions:

#### Defensible Deletion

Keep what you need, not what you don't.

#### Legal Preservation

Ensure appropriate legal retention.

#### Data Migration

Discover what you have, migrate what you need.

#### Knowledge is power, but not if it's unmanaged.

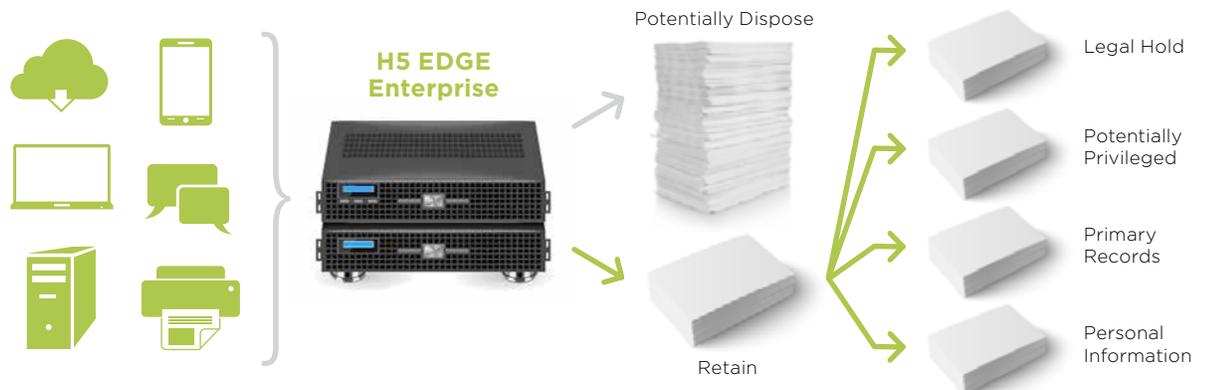

H5 EDGE is a unique and powerful product used to classify and segregate corporate information, enabling accurate retention decisions so you can keep what you need and dispose of what you don't.

H5 EDGE can either be used with organization-developed search rules to target information, or with H5 EDGE Classifiers, developed with H5 linguistic search experts. Using Classifiers, H5 EDGE becomes the most accurate and tailored behind-the-firewall solution available, providing the critical layer of intelligence needed to automate and replicate the retention decisions that records managers and attorneys would make if they were able to personally assess each document in a data source.

#### Benefits of H5 EDGE®

- Enables defensible data deletion
- Reduces discovery costs and risks
- Reduces risk of IP and privacy breach
- Improves compliance efforts
- Improves enterprise efficiency
- Lowers storage costs
- Addresses specific company retention requirements
- Displaces costly manual efforts to comply with records retention policies

#### H5 EDGE Enterprise | The only thing that should stand between you and your data

# Leveraging H5 Expertise for Information Governance Initiatives

## > H5 EDGE® Enterprise

Whether you're using H5 EDGE with your own enterprise-developed search rules or running H5 EDGE Classifiers, H5 EDGE provides a powerful classification solution, custom-tailored to address a variety of data management needs.

The input to H5 EDGE comes from your enterprise data sources, such as email, file shares and more, that your company has identified as containing content that requires filtering, analysis, or classification. H5 EDGE then classifies the information based on the targeted search definitions and exports the data to a location determined by the organization, such as a repository or archive.

## > H5 EDGE® Classifier

H5 EDGE Classifier are sets of search terms ("queries") specifically designed using H5's proprietary process to accurately identify information that correlates with the user-identified retention or classification requirements. Multiple classifiers may be used at once, depending upon the classification or filtering requirements.

## > How H5 EDGE® Adds Value

- Displaces manual effort required to manage retention
- Identifies what you need to keep and frees you to defensibly dispose of the rest
- Reduces overall data footprint, lowering infrastructure and infrastructure management costs
- Reduces risk of noncompliance with retention and legal-hold requirements
- Improved ROI on your identification and classification of information

## Powerful Technology

Powered by H5's proprietary search technology and the sophisticated data handling of Nuix, H5 EDGE provides the critical layer of intelligence that enables a simple and cost-effective solution for managing information.

## H5 EDGE® Support

**All H5 EDGE products are provided with full support of H5, including:**

- Upfront assessment to identify areas for quantifiable cost and risk reduction
- Validation of quality based on statistically valid measurement protocols
- Consulting on installation and use
- Periodic calibration to reflect changes in client business, legal holds and policies
- Customized design of the classification solution

### Customized design ensures:

- Optimal workflow to segregate or route records
- Accurate filtering, comparison, and retrieval of content with targeted text
- Optimal technology for housing and downstream management of retained records
- Best use of existing or incumbent search technologies
- Highest level of security of the overall systems architecture

**Let H5 help you leverage each stage of the discovery process to save time, money and gain the advantage in your next litigation or investigation.**
